Fed + Survey Slice and Dice

Next week's FOMC is now a coin toss. Fun. And: Does a weekend sentiment survey predict the future? Definitely (maybe).

What are we doing here?

First up, [here's the link to this week's podcast](#) with Alfonso Peccatiello, for your weekend listening pleasure. Also always look at the show notes for links, graphs, and useful add ons.

Next week's FOMC just got interesting as Nick Timiraos is presumed by many to be the rates whisperer and he came out with an article yesterday detailing why the first cut is a coin toss, not a 25bp sure thing. The FT then followed with an article that looked like a GPT-4 remix of the WSJ article.

The most interesting aspect of this, of course, is that it means next week's meeting is in play. It's a coin toss. Another interesting aspect is that it will offer us another clue as to whether or not the Fed is leaking analysis and information to the public in contravention of [its own blackout policy](#).

During each blackout period, FOMC staff officers as well as staff who have knowledge of information that is related to the previous or upcoming FOMC meeting will refrain from expressing their views or providing analysis to members of the public about current or prospective monetary policy issues.

If the Fed ends up cutting 50bps, this will likely be perceived as another in a long series of unsavory rule-violating Fed stunts following hot on the heels of all the trading scandals and the most recent determination that [yet another Fed Governor](#) joined his peers in violating internal rules designed to safeguard the reputation and credibility of the Fed.

Then again, if they go 25bps, the last 24 hours will just be a strange dream.

May you live in interesting times.

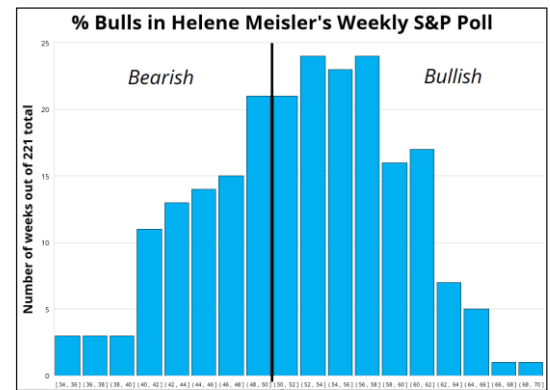

Helene Meisler's Weekend S&P Survey

[Helene Meisler](#), a well-known, much-followed voice on FinTwit (and graph paper aficionado) puts out a nice and simple S&P poll every Saturday on Twitter (example at right). This week was the first time it was bearish after 6 weeks of bullish readings. I was curious if this might mean anything, or if the survey had any predictive power in general, so I asked Helene to share her data and she's nice, so she did. :]

Overall, the results are mildly interesting, but a bit hard to explain. First of all, a few general observations on the data:

- It leans bullish. The average and median response are 52% UP and the number of bulls was above 50 in 130 out of 221 weeks (59%). I found this surprising because I view Twitter as a bearish place where doom and gloom dominates, and everyone is cheering for Red Days. Maybe I'm following the wrong people! This bullish lean was well rewarded as the survey started in May 2020 and has run (almost) weekly since, covering a period where the SPX doubled from 2864 to 5600.
- The results are volatile. Many sentiment surveys like AAll move slowly. This one can flip in a week.
- Sentiment follows price, but not in a super linear or reliable way. The next chart shows this week's survey readout vs. last week's SPX change. You can see the slope is positive but there are many occasions when stocks went up this week and sentiment was bearish (red box) or stocks went down and sentiment was bullish (green box).

Overall, the survey respondents are more rational than I would expect. There is no negativity bias and extrapolation bias isn't as bad as I expected.

Ok great, but does it predict the future???

Hard to say! There is a pattern in the data, but I honestly find it hard to explain. **When the survey results are super bullish or super bearish, the S&P 500 tends to rally significantly in the week that follows.** When the survey results are 50/50, the S&P 500 trades flat or weak.

Also, **when the data flips from bullish to bearish, the S&P 500 tends to outperform in the week that follows.** In all these cases, the results have a decent sample size, so I would be inclined to think this effect is not random, but I'm not sure.

This grid shows the output.

Next week's performance of SPX vs. this week's survey

All weekly data		% bulls						A*	B*			
		<40%	40% to 45%	45% to 50%	50% to 55%	55% to 60%	>60%					
Average	0.3%	Results for specified range of bull readings	Average	0.8%	0.6%	-0.1%	0.3%	0.1%	0.8%	Average	0.4%	0.2%
Median	0.4%		Median	1.8%	0.6%	0.0%	0.0%	0.5%	0.7%	Median	1.0%	1.2%
Win%	56.3%		Win%	60%	52%	49%	49%	62%	75%	Win%	54%	55%
Count	221		Count	10	31	40	57	48	26	Count	26	11
UP	121		UP	6	16	19	27	29	18	UP	14	6
DOWN	94		DOWN	4	15	20	28	18	6	DOWN	12	5

* A: Prior 2 weeks were bullish and this week is bearish

B: Prior 4 weeks were bullish and this week is bearish

And here's a separate chart showing the main data: next week's S&P 500 change vs. this week's survey.

Explanatory theories welcome. Thanks Helene!

Calendar

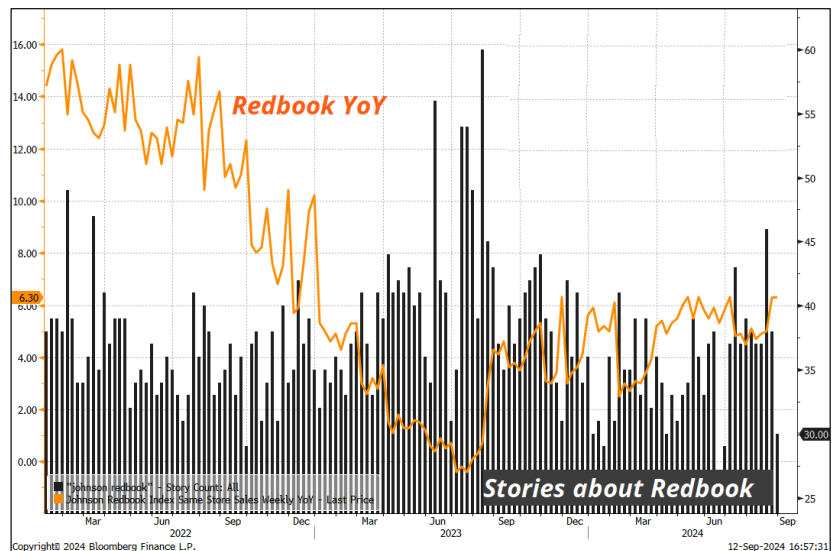

Next week's highlights include meetings from four of the ten big central banks, including the Big One. We also get ZEW, US Retail Sales, and meaningful data from the UK, AU, NZ, and CA. Here it is, for your week ahead planning purposes.

	MONDAY 16	TUESDAY 17	WEDNESDAY 18	THURSDAY 19	FRIDAY 20
Before NY open		Germany ZEW 5:00	UK CPI and PPI 2:00	Norges Bank 4:00	Germany PPI 2:00 UK Retail Sales 2:00 Sweden Jobs 2:00
NY AM	Canada Manufacturing Sales 8:30	Canada CPI 8:30	US Housing Data 8:30	Bank of England 7:00	Canada Retail Sales and PPI 8:30
	US Empire State 8:30	US Retail Sales 8:30		US Initial Claims 8:30	
		US Industrial Production 9:15 US NAHB 10:00		US Philly Fed 8:30 US Existing Home Sales 10:00	
NY PM		US 20-year bond auction 13:00	Bank of Canada Summary of Deliberations 13:30 FOMC 14:00 Powell Presser 14:40	US 10-year TIPS Auction	
		RBA Jones Speech 19:20	NZ GDP 18:45 AU Jobs 21:30	Japan CPI 19:30 NZ Credit Card Spending 23:00 Bank of Japan (between 23:00 and 00:00, probably)	

All times NYC. Add 5 hours for LDN.

Negativity Bias

Have you noticed how you stopped hearing about Johnson Redbook? It's a useless indicator, but it was heavily touted last year purely because it was weak—and that is how confirmation bias works. Now that it's showing YoY gains, magically nobody cares about it. The chart I made at right shows the number of stories on Bloomberg about Johnson Redbook (black bars) and the data itself (orange line). Negativity bias is real.

Final Thoughts

Don't forget to [watch the 2-minute Spectra School video](#) this weekend.

Have a plugged in day.

good luck ↑↓ be nimble
